EXPERIENCED R&D DIRECTOR FOR DANISENSE A/S IN TAASTRUP

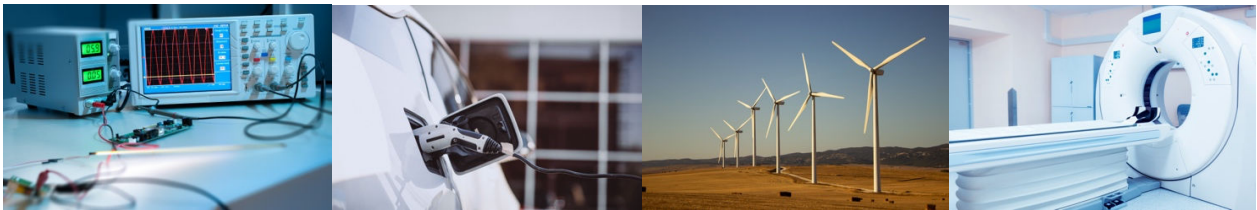

Are you an experienced R&D Director with a great record of success?
Are you looking for a position in a truly unique and supportive workplace?

Then we have the perfect position for you!

Who are we?

We are Danisense, a unique and passionate player in the current sensing market who is on a mission to redefine the high-end market by offering current sensors with a very high quality, extremely flat frequency response and outstanding DC stability. We have been providing highly specialized products to the market since 2013, allowing us to push the industry forward and create solutions for our customers, whatever they need.

The industries we work with are Renewable Energies, Medical, Particle Accelerators, Automotive, and Test & Measurement. We make some of the most precise current transducers in the world and measure currents from 10A to 11kA with accuracies of 0.0001%.

What will you be doing?

As our R&D Director you will be responsible for leading efforts involved in new product/process development and improvements with direct responsibility for all projects. This position initiates, evaluates plans, directs, executes, implements, and reports on activities related to the development of new products, improvements or cost savings ideas. This position carries with it the responsibility to mentor team members across the R&D department and for contributing to the organization while coordinating and managing the efforts of the R&D team.

Responsibilities will include the following;

- Management of the R&D department
- Collaboration and sparring with the CEO
- Develop product roadmap with the CEO and Marketing Management team
- Responsibility for state-of-the-art current sensor technological know-how within the business and project execution excellence
- Manage and meet agreed-upon budget timelines, features, and more
- Product maintenance of existing product portfolio
- Responsibility for product quality with regards to product design and user experience

- Collaborate with the CEO and senior leadership team to expand and drive the R&D team to become the strongest player in the current sensing market.
- Attend industry conferences and improve our knowledge of crucial research topics of interest

What are we looking for?

We are looking for an R&D Director who is technical and analytical. Someone who is analytical but who has the creative streak to aid in the process of new ideas and outside-the-box problem-solving. If you are good at either Ping Pong or Foosball that is also a plus.

The following are also needed for this position;

- Master's Degree in engineering
- Previous experience in an R&D position
- Experience in Magnetics, Electronics, or Mechanics (3D modelling)
- Great problem-solving skills.
- Strong attention to detail
- Excellent leadership and managerial skills
- The ability to communicate well with customers, colleagues and stakeholders
- Results-driven person who empowers teams
- High technical decision quality

What are we offering?

For this position we're offering a competitive starting salary alongside the following benefits;

- Health Insurance
- Employee Share Program
- Office lunches
- Friday work drinks
- Christmas lunch and Summer Party
- A supportive work environment
- A friendly and unique culture

We're also offering a great working environment with a range of interesting and challenging projects to develop your skills and further your development.

Now we ask you to take action

We're looking for someone who can hit the ground running and bring their technical expertise into the company so if this sounds like the type of role you're interested in and you want to find out more then get in touch!

Contact and application

Please apply as quickly as possible to our CEO: Henrik Elbæk as he is anxious to meet you and get things rolling.

You can apply at: job@danisense.com or call our us at: +45 35 10 23 73 if you have further questions.
